

**Big 4 Audit, Assurance and Consulting Firm embraces RSAM**

Secaucus, NJ - July 03, 2007: Relational Security Corporation, provider of the best of breed risk assessment & compliance management software- RSAM™ which assists clients with their governance, risk and compliance initiatives, today announced that a Big 4 Audit, Assurance and Consulting firm has selected and implemented RSAM to assist them in conducting internal Risk & Compliance assessments.

“While RSAM is commonly embraced by these large organizations, selection by a global firm whose core focus is Risk & Compliance services is an impressive confirmation of our leadership in the market. Big 4 firms are very aware of the capability of tools available in the Risk & Compliance space, and we are happy that RSAM continues to be accepted as the most mature and comprehensive tool in the space.” said Vivek Shivananda, President & CEO of Relational Security. “We are quite pleased that such companies, who are quite mature in their approach to risk management, who have built home-grown applications to solve this specific problem, continue to turn to RSAM for their ongoing solution. While internally developed tools may support an initial round of assessments, organizations quickly come to realize they need far greater functionality to support their ongoing requirements (growing size of the assessment needs, changing scope, reporting and workflow). Once potential customers see that RSAM can quickly and easily replicate & enhance their familiar assessment processes, and add tremendous value for a fraction of the current total cost of ownership, the decision becomes very simple.” added Shivananda.

“Using RSAM’s intuitive Administrative GUI, the customer was able to quickly replicate their current process & requirements in RSAM. In addition, RSAM provided additional capabilities far beyond their existing functionality, increasing their efficiencies and providing a scalable platform to meet their increasing growth in assessments” said Kevin Day, CTO of Relational Security. “It is gratifying to watch as RSAM adapts to so many varying & complex customer needs on the fly. Even better, it is inspiring to see how our customers transition from purchase to pilot in a short timeframe.”

**About Relational Security**

Relational Security Corporation provides an enterprise class, best of breed risk assessment/management and compliance software - RSAM™ to assist clients with their governance, risk and compliance initiatives. Relational Security’s client roster is an impressive listing of over 75 Large, Marquee & Fortune 1,000 organizations across a variety of vertical industries including financial services, insurance, healthcare, technology, education, government and energy, which have selected RSAM™ for their Risk Assessment, Compliance and Risk Management efforts. **About RSAM™**

Relational Security’s flagship product RSAM™ is built on an open and flexible framework that quickly adapts to any institution’s environment. RSAM™ blends an intuitive multi-user, web-based interface with practical, enhanced risk assessment methodology that can be used to assess risks, controls, and

the compliance of technical, physical, and administrative assets, business functions, processes and more. The underlying principle of the RSAM™ technology is to gather intelligent and consistent information to help institutions qualify and quantify risk based on business criticality and compliance requirements.

RSAM™'s road-tested control templates/domains provide comprehensive libraries of controls to choose from, making it easier for clients to roll out their assessments. In addition to the assessment control templates available from Relational Security (such as HIPAA, PCI, GLBA/FFIEC, NIST, ISO 17799, TSP, BITS-FISAP, SOX, COBIT and more), RSAM™ provides the ability to add in-house or customized “standards” or “compliance” modules, making RSAM™ a complete solution for an institution’s risk and compliance needs.
