

FOR IMMEDIATE RELEASE

Relational Security releases RSAM™ v5.0

Secaucus, NJ - April 2, 2007 - Relational Security Corporation, which provides best of breed risk assessment & compliance management software- RSAM™ announced the general release of its much anticipated RSAM™ v5.0. This new version of RSAM™ provides many great enhancements to the existing RSAM™ v4.5 feature set, while also integrating with Relational Security's powerful new assessment & reporting modules.

"As risk and compliance assessments become more and more business critical and as regulations and standards become more comprehensive, assessment requirements have evolved beyond checklists, spreadsheets, document/policy management systems and automated scanning tools," said Vivek Shivananda, President and Chief Executive Officer. "Today, effective risk & compliance assessments must analyze data related to administrative, physical, operational and technical controls, relational risks and criticality factors, business impact, and compliance requirements. The 5.0 release of our RSAM™ product further on our successful assessment framework and provides an easy mechanism to gather and track ad-hoc assessment findings along with survey/template based assessment data."

The new RSAM™ 5.0 Suite includes:

- RSAM™ 5.0 (upgrade to the RSAM v4.5)
- RSAM™ Web Reporting module
- RSAM™ Dashboards module
- RSAM™ Findings module

The 5.0 release of RSAM™ further builds on our successful assessment framework with new integrated features like user self-registration, user object registration, enhanced workflow options, additional configuration options like multi-domain authentication via LDAP, and many visual and functional enhancements to the RSAM GUI.

RSAM™ Findings Module provides a powerful mechanism to integrate and track ad-hoc assessment findings with survey/template based assessment data. "The value and use of the RSAM™ Findings module is only limited to one's imagination" said Kevin Day - CTO of Relational Security Corporation. A few examples and use-case scenarios include [integration of vulnerability data and other data from home-grown or commercial tools, policy exception tracking, controls testing, incident tracking, ad-hoc audit findings tracking or building customized ad-hoc findings categories.](#)

RSAM™ Dashboards Module is a great complement to the RSAM Web Reporting module. RSAM Dashboards provides quick access to key performance indicators, trend data, assessments, findings, without having to launch an RSAM report.

The RSAM™ Findings & RSAM™ Dashboards modules integrates with the core RSAM™ product features, such as workflow, permission assignment, data import, and e-mail notification.
